

Intro/ Install

Friday, 29 October 2021

4:59 PM

Installation:

1. Copy tar file from [mongo.com](https://www.mongodb.com/try/download/commercial)
2. Extract to a location.
3. To make it execute from any path, copy bin folder to /usr/local/bin
`sudo cp ./bin/* /usr/local/bin/`
4. Create a 'mongodb' folder & 'data' & 'logs' subfolder beneath it.
5. To start mongodb , run the below command

```
mongod --dbpath /Users/vmurugesan/work/software/mongodb/data --logpath /Users/vmurugesan/work/software/mongodb/logs/mongo.log
```

6. To start a daemon, add --fork argument

```
mongod --fork --dbpath /Users/vmurugesan/work/software/mongodb/data --logpath /Users/vmurugesan/work/software/mongodb/logs/mongo.log
```

7. Open another terminal window and type `mongo` . Now, DB should get connected and a
8. To check the DB
`show dbs`

a shell gets displayed.
